

METHOD AND MEANS FOR CONSTRUCTING MASONRY WALLS

ABSTRACT

A spacer/centering element comprising, preferably on its periphery and/or close thereto, feet (5) as zonal resting intermediaries for blocks (1) pertaining to two superposed rows and, on one side thereof, first centering means (6a) for engaging a hole (2, 3) in a block (1) and, on the opposite side thereof, second centering means (7a) offset from the first and arranged to engage a hole in an overlying block (Figure 1).
